Fisheries and Marine Service

Manuscript Reports

These reports contain scientific and technical information that represents an important contribution to existing knowledge but which for some reason may not be appropriate for primary scientific (i.e. *Journal*) publication. They differ from Technical Reports in terms of subject scope and potential audience: Manuscript Reports deal primarily with national or regional problems and distribution is generally restricted to institutions or individuals located in particular regions of Canada. No restriction is placed on subject matter and the series reflects the broad interests and policies of the Fisheries and Marine Service, namely, fisheries management, technology and development, ocean sciences and aquatic environments relevant to Canada.

Manuscript Reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report will be abstracted by *Aquatic Sciences and Fisheries Abstracts* and will be indexed annually in the Service's index to scientific and technical publications.

Numbers 1-900 in this series were issued as Manuscript Reports (Biological Series) of the Biological Board of Canada, and subsequent to 1937 when the name of the Board was changed by Act of Parliament, as Manuscript Reports (Biological Series) of the Fisheries Research Board of Canada. Numbers 901-1425 were issued as Manuscript Reports of the Fisheries Research Board of Canada. The series name was changed with report number 1426.

Details on the availability of Manuscript Reports in hard copy may be obtained from the issuing establishment indicated on the front cover.

Service des pêches et des sciences de la mer

Manuscrits

Ces rapports contiennent des renseignements scientifiques et techniques qui constituent une contribution importante aux connaissances actuelles mais qui, pour une raison ou pour une autre, ne semblent pas appropriés pour la publication dans un journal scientifique. Ils se distinguent des Rapports techniques par la portée du sujet et le lecteur visé: en effet, ils s'attachent principalement à des problèmes d'ordre national ou régional et la distribution en est généralement limitée aux organismes et aux personnes de régions particulières du Canada. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques du Service des pêches et de la mer, notamment gestion des pêches; techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les Manuscrits peuvent être considérés comme des publications complètes. Le titre exact paraît au haut du résumé de chaque rapport, qui sera publié dans la revue *Aquatic Sciences and Fisheries Abstracts* et qui figurera dans l'index annuel des publications scientifiques et techniques du Service.

Les numéros de 1 à 900 de cette série ont été publiés à titre de manuscrits (Série biologique) de l'Office de biologie du Canada, et après le changement de la désignation de cet organisme par décret du Parlement, en 1937, ont été classés en tant que manuscrits (Série biologique) de l'Office des recherches sur les pêcheries du Canada. Les numéros allant de 901 à 1425 ont été publiés à titre de manuscrits de l'Office des recherches sur les pêcheries du Canada. Le nom de la série a été changé à partir du rapport numéro 1426.

La page couverture porte le nom de l'établissement auteur où l'on peut se procurer les rapports sous couverture cartonnée.

ABSTRACT

Harris, G.D., A.W. Argue, F. Logie and J. Sawatsky. 1978. Georgia Strait logbook program for salmon sport fishermen: basic catch and effort data, 1974 to 1976. Canada Dept. Fisheries and Environment, Fisheries and Marine Service, Pacific Region. Manuscript Report 1474: 397 p.

Approximately 250 sport fishermen in Georgia Strait voluntarily report their daily catches of adipose-clipped and unmarked chinook and coho salmon, as well as daily fishing effort and fishing locations, as part of the Georgia Strait Head Recovery Program. This report describes the sport logbook program and presents sport logbook catch and effort data for 1974 to 1976.

Key words: Sport fishing, Catch statistics, Chinook salmon, Coho salmon.

RÉSUMÉ

Harris, G.D., A.W. Argue, F. Logie and J. Sawatsky. 1978. Georgia Strait logbook program for salmon sport fishermen: basic catch and effort data, 1974 to 1976. Canada Dept. Fisheries and Environment, Fisheries and Marine Service, Pacific Region. Manuscript Report 1474: 397 p.

Environ 250 pêcheurs sportifs du détroit de Georgie ont accepté de faire rapport, volontairement, de leurs prises quotidiennes de saumon coho et de saumon quinnat étiqueté et non étiqueté, ainsi que de leur lieu de pêche et de leur effort de pêche, dans le cadre du programme de récupération des têtes du détroit de Georgie. Le rapport décrit le programme de journal de bord du pêcheur sportif et présente les données sur l'effort et les prises tirées des journaux de bord pour les années 1974 à 1976.

Mots clés: Pêche sportive, Statistiques sur les prises, Saumon coho, Saumon quinnat.

INTRODUCTION

A recent revision of tidal sport catch statistics demonstrated that sport fishermen in Georgia Strait catch over 20% of the total British Columbia chinook (*Oncorhynchus tshawytscha*) and coho salmon (*O. kisutch*) harvest in tidal waters, and over 75% of the tidal harvest of these species in Georgia Strait (Argue, Coursley and Harris, 1977). In spite of the large annual catch by Georgia Strait sport fishermen - estimated to exceed 830,000 chinook and coho salmon - there is virtually no documentation of seasonal catch and effort by individual sport fishermen. The Sport Logbook Program is an initial attempt to provide daily, monthly and annual catch and effort profiles for a selected group of Georgia Strait salmon sport fishermen.

The Sport Logbook Program was initiated late in 1973 as part of the Georgia Strait Head Recovery Program (see descriptive brochure in Fig. 1), which in turn is part of the Canadian Chinook and Coho Catch Sampling and Mark Recovery Program (Argue, 1976). The primary objective of the Sport Logbook Program was to obtain estimates of the incidence of adipose-clipped chinook and coho salmon in the Georgia Strait sport catch. The incidence of adipose-clips coupled with accurate salmon sport fishing catch statistics and voluntary returns of coded-wire-tagged (CWT) chinook and coho salmon heads through the Georgia Strait Head Recovery Program (GSHR), will ultimately be used to estimate sport catch contributions by various tagged stocks of chinook and coho salmon. Fishery contribution estimates will be essential for evaluating salmonid enhancement facilities and techniques, deciding on sites for new facilities, and refining conservation strategies for fishery management and habitat protection. Ironically, the first application of sport logbook data was to demonstrate a large bias in the published salmon sport fishery catch statistics, and to help in revising them (Argue *et. al.*, 1977).

Sport logbooks are held voluntarily by a selected group of fishermen who for the most part, fish more often and catch more fish than do the majority of Georgia Strait sport fishermen. Logbook fishermen are asked to complete daily records of catch and effort for each fishing location. At present there are approximately 250 active logbook anglers distributed throughout Georgia Strait and Juan de Fuca Strait (Statistical Areas 13 to 20, 28 and 29 ABC) (Fig. 2). Since these fishermen are generally "better than average" the profile data on catch per boat day, catch per angler day and annual catch and effort per angler are biased towards high angler catch efficiency, and thus provide an upper limit profile of Georgia Strait sport fishermen. The logbook data on incidence of adipose-clipped chinook and coho in the total sport catch should not be biased as it is extremely unlikely that any angler would selectively catch or avoid catching clipped salmon, particularly when the general incidence of adipose-clips is less than one in a catch of twenty fish.

In the following text we describe logbook fishermen selection, logbook design, and the content, data treatment and organization of the Appendices. The report concludes with a brief summary of logbook results.

GEORGIA STRAIT HEAD RECOVERY

Wanted:

The head of any chinook or coho salmon that is caught in Georgia Strait (waters east of Sheringham Pt. and south of Hardwicke Island), and that is missing its adipose fin - the small fleshy fin on the back just in front of the tail.

Reason

The missing adipose fin signals the presence of a microscopic coded-wire-tag implanted in the nose of the fish.

Procedure

If your salmon is missing the fin, cut off the head and turn it in at the nearest "Head Depot". There are more than 100 Head Depots around Georgia Strait. Please do not attempt to find or remove the tag.

Prizes

If the head contains a tag, as do more than 85% of all heads turned in, Fisheries and Marine Service will enter your name in a draw for one \$500. prize and six \$50. prizes (seven prizes per month June - Sept., and bimonthly Oct. - May). If your name is drawn you must answer a skill testing question in order to win a prize.

For More Information:

Call your local Fisheries Office or phone collect to 666-6383.

Purpose of the Program

Several million chinook and coho salmon have been tagged and released at hatcheries and streams in B.C. and the U.S. When you turn in the head of adipose clipped salmon, Fisheries lab workers dissect the tag from the nose cartilage and read it under a microscope.

The coded data on the tag reveals such information as where and when the salmon was released, and to what experimental group the fish belonged. Combined with the information you supply (when, where, and how the salmon was caught) the tag data tells us how many fish each tagged stock contributes to each B.C. fishery; shows us migration routes and timing of our chinook and coho; and measures the success of experimental hatchery diets, release times, and other hatchery techniques.

In practical terms, this information helps in four ways to produce more salmon for B.C. fishermen. Your tag return data is helping:

- 1) to improve hatchery techniques.
- 2) to identify the best sites for future enhancement projects.
- 3) to manage the fisheries so as to protect weak stocks of salmon while exploiting the stronger ones.
- 4) to ensure the conservation of productive salmon streams.

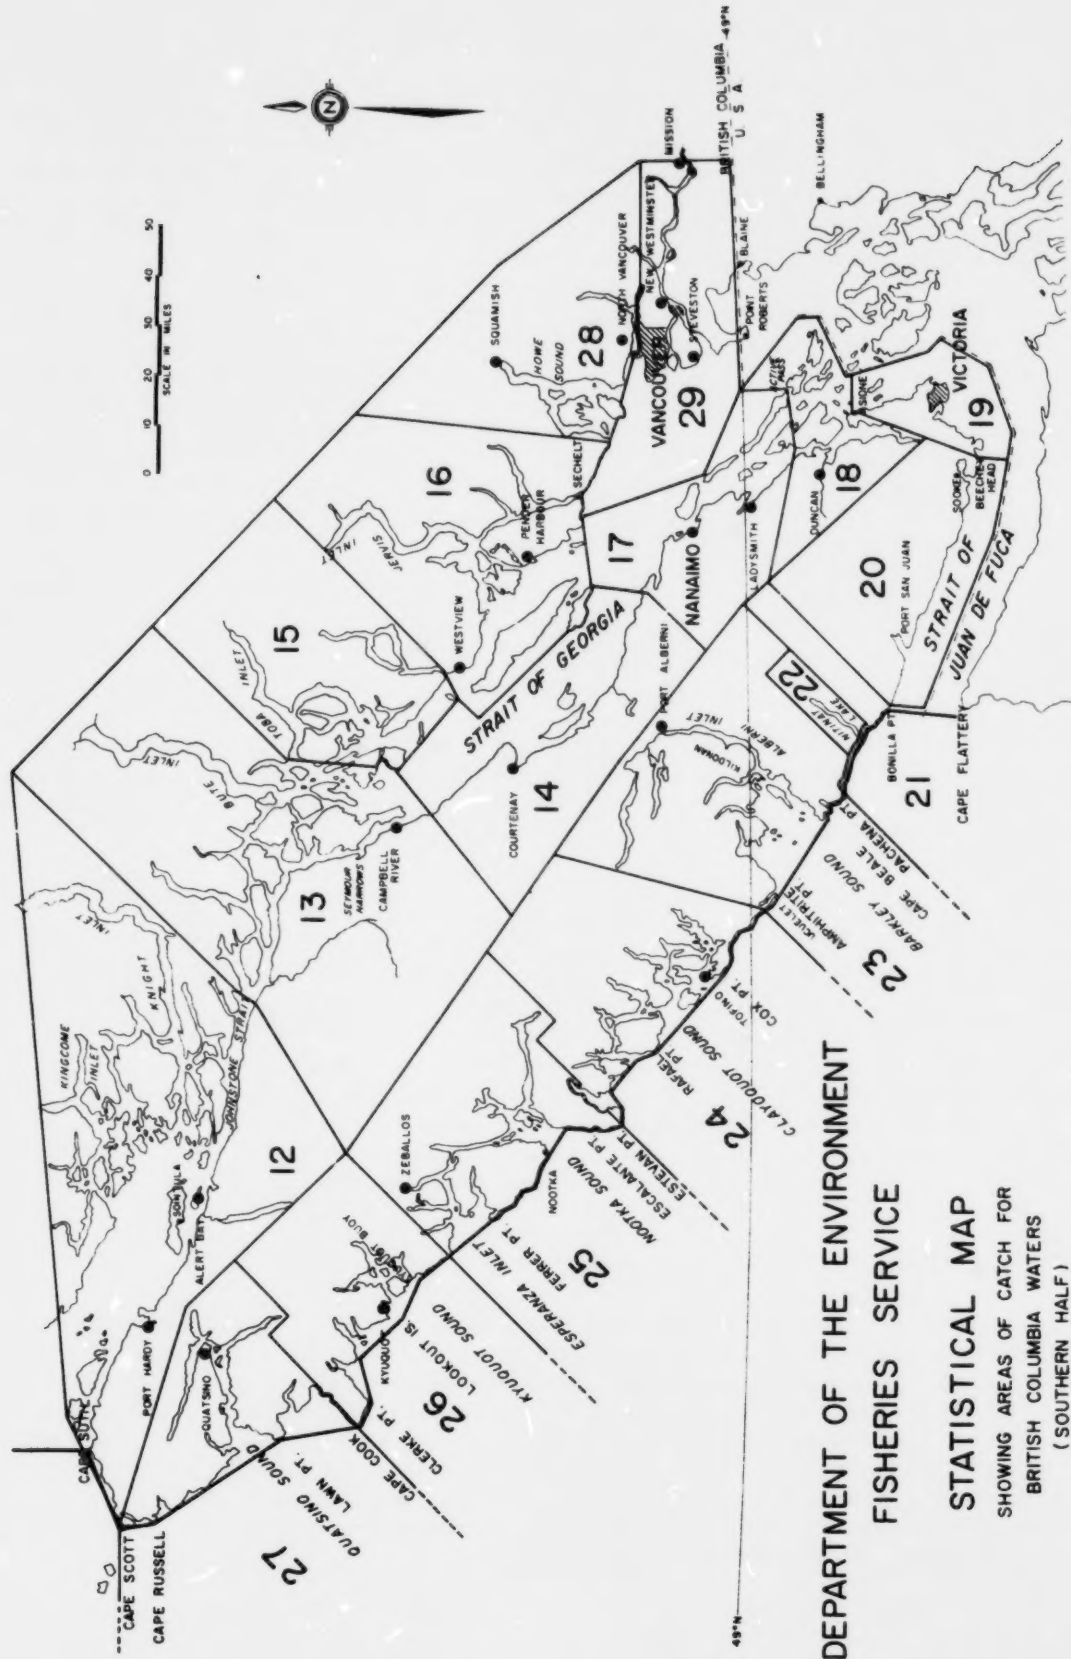

Commercial

Commercial fishermen selling to Norpac, Baynes Sound Oyster Co., and Campbell River Fish Co. can sell the marked fish head-on. Ask for an information label to fill out, then tie the label to the jaw of the fish.

Sport

Sports fishermen can turn in the heads of marked fish at any sport Head Depot. Ask the depot operator for an information label to fill out, then cut off the head of the fish, tie the label to the head, and deposit it in the preservative or freezer provided. Freeze the head if you are unable to turn it in right away.

Figure 1. Information brochure describing the Georgia Strait Head Recovery Program. Note that in 1974 a \$3.00 reward was paid for each voluntarily returned head that contained a CWT. This reward system was discontinued on March 31, 1975 and the reward system noted in the above brochure was instituted.

BRITISH COLUMBIA WATERS
(SOUTHERN HALF)

Figure 2. Southern British Columbia Sport Statistical Areas.

CHOICE OF FISHERMEN

Logbook fishermen were originally selected on the basis of having turned in three or more CWT heads to the Georgia Strait Head Recovery Program during 1973. The Department of Fisheries and Environment sent letters to these active GSHR participants, asking them, as fishermen who fished with some regularity and success, if they would conscientiously keep a logbook record of their catch. Fisheries personnel also approached Fish and Game clubs for volunteers.

From mid-1974 to the present, most fishermen have entered the Sport Logbook Program in response to a request (Fig. 3) which is published in every issue of the GSHR Bulletin. A Bulletin is sent to every fisherman who turns in the head of an adipose-clipped fish. By selecting people who are already participating in the GSHR program and who consider themselves to be serious fishermen, Fisheries obtains accurate and regularly kept logbooks while realizing that the catch recorded is not that of average fishermen but of a group with considerably higher-than-average catch success.

SPORT LOGBOOK DESIGN

GENERAL

Upon volunteering, each fisherman is mailed a logbook, assigned an individual angler number, and requested to return completed logbook sheets every month. Fisheries later returns the logbook sheets for the fishermen to use as their personal fishing log.

ORIGINAL FORMAT

The original logbook format (Fig. 4), phased out in the summer of 1975, was designed simply to obtain the incidence of adipose-clipped chinook and coho in the Georgia Strait sport catch. By Statistical Area, date, and fishing location, each fisherman recorded chinook and coho catches, and separated adipose-clipped from non-adipose-clipped salmon. Fishermen were not expected to record the fishing days on which they caught no chinook or coho. By recording fish caught they provided a record of their total catch for the months during which they kept logbooks.

SECOND FORMAT

The next logbook format (Fig. 5) served not only as a record of the fisherman's catch, but also as a record of his fishing effort. Fishermen were asked to enter all chinook and coho fishing days, even "nil" days on which they caught no chinook or coho. In addition, logbook fishermen now recorded the number of people fishing in the boat on each trip. Thus the second logbook format expanded the usefulness of logbook data beyond a simple record of seasonal catch and incidence of adipose-clipped fish. The logbook data now provided a profile of basic effort and catch statistics for a select group of fishermen.

A REQUEST

Any sports fishermen in Georgia Strait who would care to help us even more than simply by turning in heads may be interested in keeping a logbook of their catch records for us. We ask that they keep a tally of the numbers of marked and unmarked coho and chinook caught and the date and location of each fishing trip. The logbook reports are sent in at the end of the month for analysis. Fisheries later returns the logbook sheets for the fishermen to use as their personal fishing log.

If any fisherman who fishes with some intensity who would be willing to keep these records for us on a regular and serious basis would write me, I will send on a book and instructions. Information on the ratio of marked to unmarked salmon is needed for estimating the sport catch contribution by various tagged hatchery and wild stocks. Also, logbook data has been used for checking and revising sports catch estimates in Georgia Strait.

SPORT FISH LOG BOOK

INSTRUCTIONS

1. At the top of each page enter your name and your personal log book number. Your log book number is _____.
2. For each Statistical Area you fish (See map next page) on any single date on which you fish for coho or chinook record the locations you fished and the number of people fishing in the boat. Personally examine all chinook and coho for the presence or absence of the adipose fin (See diagram next page), and record as follows:
 - a) In the "unmarked" columns record the number of coho &/or chinook with adipose fin intact.
 - b) In the "marked" columns record the number of coho &/or chinook missing the adipose fin.
3. Turn in the heads of adipose-clipped fish to depots just as you normally would.
4. At the end of each month during which you have caught salmon, mail your completed log book sheets to:

Georgia Straight Head Recovery Program
Department of the Environment
1090 West Pender Street
Vancouver, B.C.
V6E 2P1

Note: If you wish to record only your personal fish, enter the number "1" for "Number of People Fishing in Boat".

ANALYTICAL METHODS

BASIC STRATA

Data is presented under the following appendix headings:

- "INCIDENCE OF MARKED FISH" (APPENDIX A)
- "BOAT SUCCESS LEVEL" (APPENDIX B)
- "ANGLER SUCCESS LEVEL" (APPENDIX C)
- "ANCLER LOGBOOK ENTRIES" (APPENDIX D)

Within each appendix data are presented in the same basic time and location strata. Month and year (1974 to 1976) are the time strata, while fishing location is expressed in terms of Statistical Area. Logbook fishermen also recorded detailed fishing locations within Statistical Areas; this information is maintained in a computer file, but is not reproduced in this report. Appendices A, B, and C also present logbook data for grouped Statistical Areas because there is often insufficient data in single Areas to be statistically useful. The combined Statistical Areas, grouped according to similarities in their fisheries, are 13-14, 15-16, 19-20, and 28-29. Also, Appendices A, B, and C present the data from all the above Statistical Areas combined under the heading "STATISTICAL AREA ALL". Monthly catch and effort totals are listed for each table in Appendices B, C, and D. "YEAR" totals are the sum of the monthly totals for each table.

INCIDENCE OF MARKED FISH

Content and Data Treatment

Appendix A is the basic analysis of logbook data - a calculation of the incidence of adipose-clipped chinook and coho in the sport catch. The incidence expresses the number of marked fish as a percentage of the total number of fish caught. For example, on page 27, for Area 13 in 1974, logbooks report 525 unmarked coho and 21 marked coho; the incidence of marked coho is $21 \div (525 + 21)$ equals .038 or 3.8%.

The Appendix A tables are organized under the following column headings:

"# REPORTING"	The number of logbook fishermen reporting chinook or coho catches in the Area and time period indicated,
"CATCH DAYS"	The total number of days on which the reporting fishermen caught chinook or coho,
"COHO UNMARK"	The total logbook-reported catch of coho with adipose fins,
"COHO MARK"	The total logbook-reported catch of adipose-clipped coho,
"COHO % MARK"	The incidence of adipose-clipped coho in the total logbook-reported coho catch. Coho incidence by "YEAR" is calculated from the sum of monthly unmarked and marked catches, as in the example above,

"CHINOOK UNMARK")
"CHINOOK MARK") same as coho
"CHINOOK % MARK")

BOAT SUCCESS LEVEL

Content

Appendix B expresses the fishing success of logbook fishermen in terms of "CATCH PER BOAT DAY". A "BOAT DAY" is defined as one boat's fishing effort during one day; and "CATCH PER BOAT DAY" is simply the number of fish caught in a boat's fishing day. In the tables of Appendix B is a tally of the number of logbook-reported boat days at each level of catch success - from "1" fish per boat day to "9 PLUS" fish per boat day. Since the fishing success of logbook fishermen is higher than average, these tables can be seen as the upper limit of boat success for each Area and time period covered.

Data Treatment

In Appendix B, each reported boat day appears on three separate tables: on the "COHO" table, on the "CHINOOK" table, and on the "COMBINED" coho and chinook table. For example, if during one boat day the overall catch was 5 coho and 2 chinook, then this boat day would be tallied first as a coho fishing day with a success level of 5, next as a chinook fishing day with a success level of 2 and finally as a combined fishing day with a success level of 7. Or, if the boat caught no salmon at all during a fishing day, success levels would be 0 for coho, 0 for chinook, and 0 for the combined species.

Appendix B does not use data from the original logbook format because the original format only recorded catch, not effort (boat days). The second format was phased into use during 1975, beginning in April, coming into wide use in August, and fully replacing the original format by December. Consequently, Appendix B data reaches a useful volume only in August 1975. It would obviously be misleading to compare total boat days between months during 1975 because the number of second format logbooks in use steadily increases during the year.

A very small percentage (less than 0.5%) of the boat days reported under the second logbook format could not be used in Appendix B. For example, boat days on which a boat's catch is taken in more than one Statistical Area cannot be assigned to the tables for any single Area, so these boat days and associated catch are excluded from the appendix.

Organization

On the "BOAT SUCCESS LEVEL" tables, two numbers appear in each box. The upper-left number is the reported "# OF BOAT DAYS" for a particular month and Area, at a particular level of catch success. The lower-right number is the reported "# OF FISH" caught by the reported "# OF BOAT DAYS".

ANGLER SUCCESS LEVEL

Content

Appendix C is identical to Appendix B in most respects. The difference is that Appendix C expresses fishing success of logbook fishermen in terms, not of "CATCH PER BOAT DAY", but of "CATCH PER ANGLER DAY" - the number of fish caught in an angler's fishing day.

Data Treatment

Appendix C treats each logbook angler day as a "COHO" fishing day, a "CHINOOK" fishing day, and as a "COMBINED" coho and chinook fishing day. Appendix C also excludes data from the original logbook format as well as data from days in which a boat's catch is taken in more than one Statistical Area.

"CATCH PER ANGLER DAY" is calculated by dividing the number of people fishing in the boat each day into the daily catch by all people in the boat. For example, if a logbook fisherman reports that on a given day 3 people fishing in the boat caught a total of 11 coho, the coho catch per angler day would be: $11 \text{ coho} \div 3 \text{ angler days} = 3.667 \text{ coho per angler day}$.

Organization

The only difference in organization between "ANGLER SUCCESS LEVEL" and "BOAT SUCCESS LEVEL" tables is that the ten levels of angler catch success extend from "0" only to "4 PLUS" because four salmon is the personal daily bag limit.

ANGLER LOGBOOK ENTRIES

Content and Data Treatment

Appendix D shows the monthly catch and effort data submitted by each individual logbook angler. Both original format data and second format data are used, as are reports from days in which a boat's catch is taken in more than one Statistical Area.

Organization

Each logbook fisherman's catch and effort record is accompanied by his logbook angler identification number, i.e. his "ANGLER CODE". The reports appear in order of year, "STATISTICAL AREAS FISHED", and "ANGLER CODE" within "STATISTICAL AREAS FISHED". When more than one Statistical Area is fished, the reports are sorted by Area in an increasing numerical sequence such as 13, 13/14, 13/14/15, 13/14/18, 13/15, 14, etc.

Two letters and two numerals make up an angler code. The first letter indicates where the angler lives, while the second letter and the two numerals are simply an identification number. Within Statistical Areas the

angler codes are sorted alphanumerically. When a fisherman ceases to participate in the logbook program, his angler code is reserved for a year before being issued to a new participant.

The first letters of the "angler codes" specify the following places of residence:

- C: Courtenay-Comox: Royston to Black Creek,
- D: Duncan-Ladysmith: Cobble Hill, Cowichan Valley, Crofton, Chemainus, to Ladysmith,
- G: Gulf Islands: Gabriola to Saturna,
- I: Interior of B.C. and all Points East
- M: Lower Mainland - Vancouver: Lower Fraser Valley to Squamish, including Bowen Island,
- N: Nanaimo: Cassidy to Nanoose Bay,
- P: Parksville-Qualicum: Northwest Bay to Port Alberni and Union Bay, includes Hornby-Denman,
- R: Campbell River and North: Oyster River to Kelsey Bay,
- S: Southern Vancouver Island - Victoria: Sooke to Sidney, and Saanich Inlet,
- T: Sunshine Coast: Gibsons, Sechelt, Pender Harbour, Powell River, to Lund,
- U: United States.

"CHINOOK" and "COHO" lines for each logbook record show the anglers' catch in each month. The number in brackets indicates how many were adipose-clipped. The unbracketed number, the total catch, includes both adipose-clipped and non-adipose-clipped salmon.

The "ANGLER DAYS" and "BOAT DAYS" lines on the tables show the anglers' monthly fishing effort. Since the original format of the logbook did not include a column for number of people fishing in the boat, "ANGLER DAYS" information is not available ("NA") for any months or years before the logbook fishermen received a second format logbook. The "BOAT DAYS" line, however, does include original format data, but marks such data with an astrix to indicate that it may not be a full record of effort for that month or year.

Month columns prior to the month in which the fisherman received his logbook have been left blank to differentiate between them and months in which a registered logbook fisherman reported no catch or fishing effort.

GENERAL DATA OBSERVATIONS

TOTAL REPORTED CATCH AND EFFORT

Logbook anglers submitted 346 monthly reports in 1974, 480 monthly reports in 1975, and 635 monthly reports in 1976 (Table 1). Correspondingly, days on which catches were reported increased from approximately 1900 in 1974 to over 4100 in 1976, while the average salmon catch on these days declined slightly from 3.5 in 1974 to 3.0 in both 1975 and 1976.

Table 1. Annual summary of sport logbook data.

	Monthly Reports Submitted	Catch Days Reported	Coho Catch			Chinook Catch		
			Unmark	Mark	% Mark	Unmark	Mark	% Mark
1974	346	1872	3646	141	3.7	2751	80	2.8
1975	480	2666	4623	206	4.3	4039	111	2.7
1976	635	3424	4965	300	5.7	7051	163	2.3

Total reported catch by logbook fishermen exceeded 12,000 in 1976, which was an increase from 1974 of roughly 100% - about the same percentage increase as that for monthly reports submitted. Compared to the catch of the general angling public, the logbook-reported catch favoured chinook since just over one-half of the logbook catch was chinook compared to only 42% chinook for the total Georgia Strait sport catch (Argue *et. al.*, 1977).

Also note in Table 1 that the percentage of marked fish in the coho catch consistently increased over the three year reporting period, from 3.7% in 1974 to 5.7% in 1976; by comparison the percentage of marked chinook stayed relatively constant, around 2.5%.

Tables 2 to 4 present the material of Table 1 in greater geographical detail, summarizing catches, effort and percentage marked by Statistical Area, for 1974, 1975 and 1976 respectively.

SEASONAL INCIDENCE OF MARKED FISH IN THE SPORT CATCH

Figure 6 presents the average monthly incidence (percentage) of marked fish in the Georgia Strait coho and chinook catches between February 1974 and November 1976. Values plotted are a moving three month mean of the incidence of marks in the total catch reported by logbook fishermen.

The incidence of marked coho for all Areas combined shows a distinct seasonal pattern; peaking in April or May, remaining relatively high through the summer months, peaking again in September or October, and then dropping rapidly to a low between December and February. Over the year, the incidence of marks in the coho catch ranges from less than 1% in the winter to over 6% in the summer.

When separate Statistical Areas are compared (Fig. 7), using three-month moving means of the average monthly incidences for 1974, 1975, and 1976 combined, the incidences of marked coho show seasonal trends in each Area that are similar to the trend for all Statistical Areas. Note that Area 13-14 generally has the highest incidence of marked coho, between 5 and 7 percent; Area 15-16 has the lowest incidence of marks, between 2 and 4 percent; while Areas 19, 20, 28 and 29 supplied insufficient data for plotting in Figure 7.

Figure 6. Incidence of marked coho and chinook in the catch reported by report logbook fishermen for all Georgia Strait Statistical Areas.

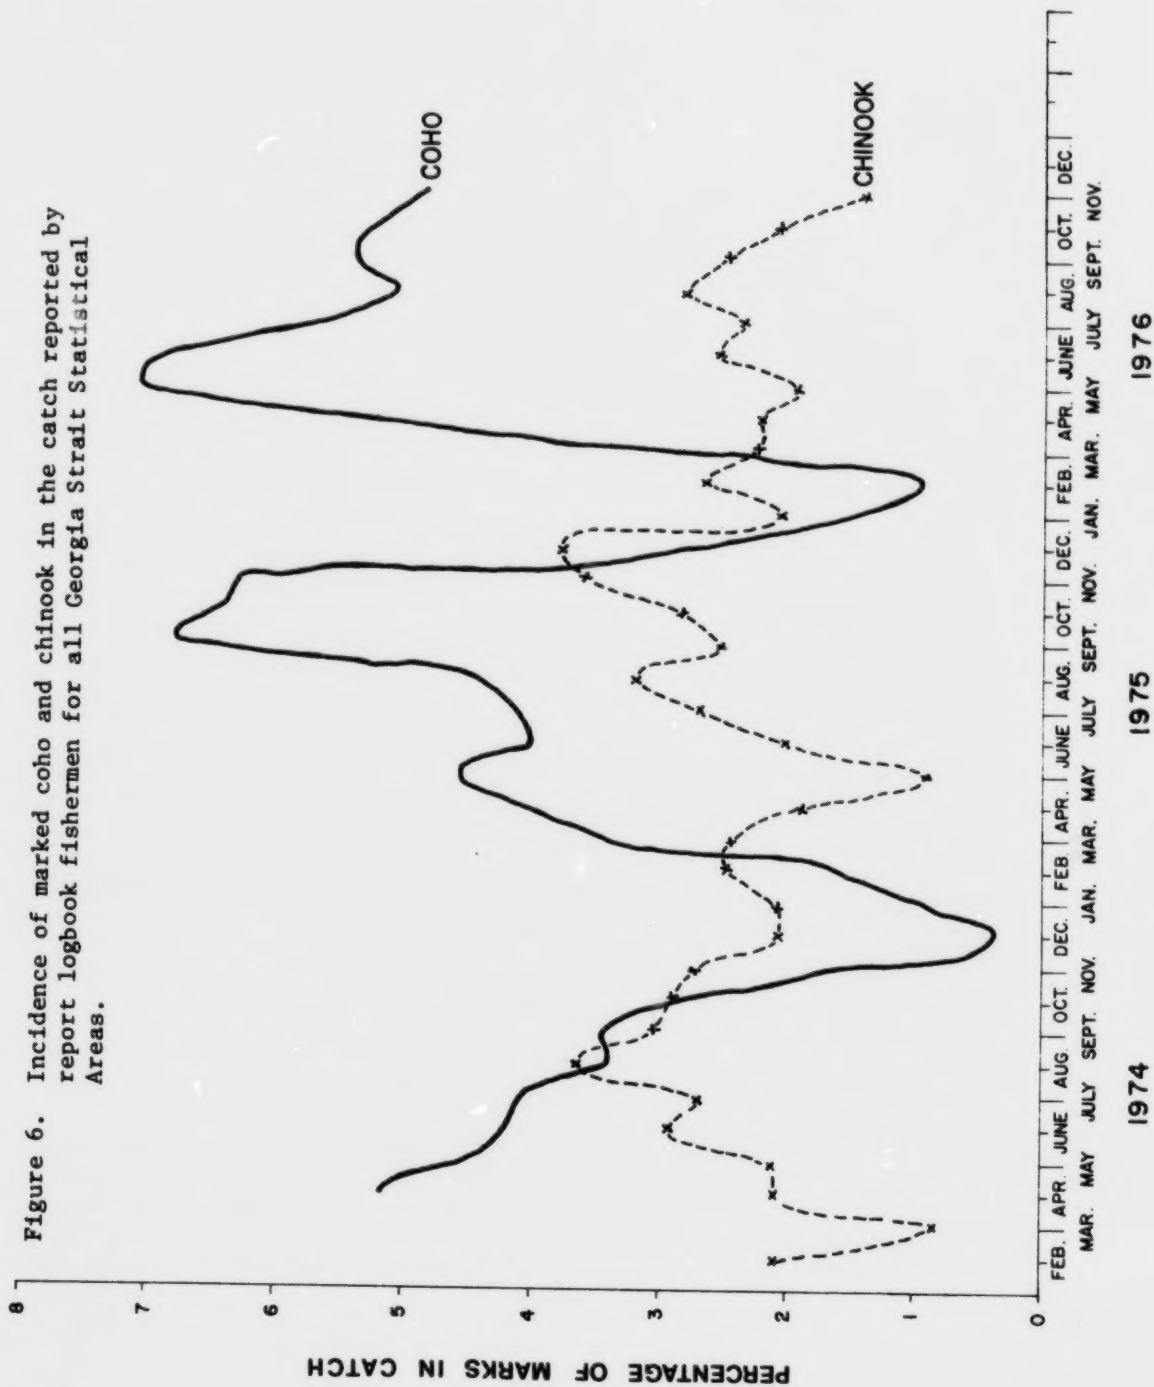

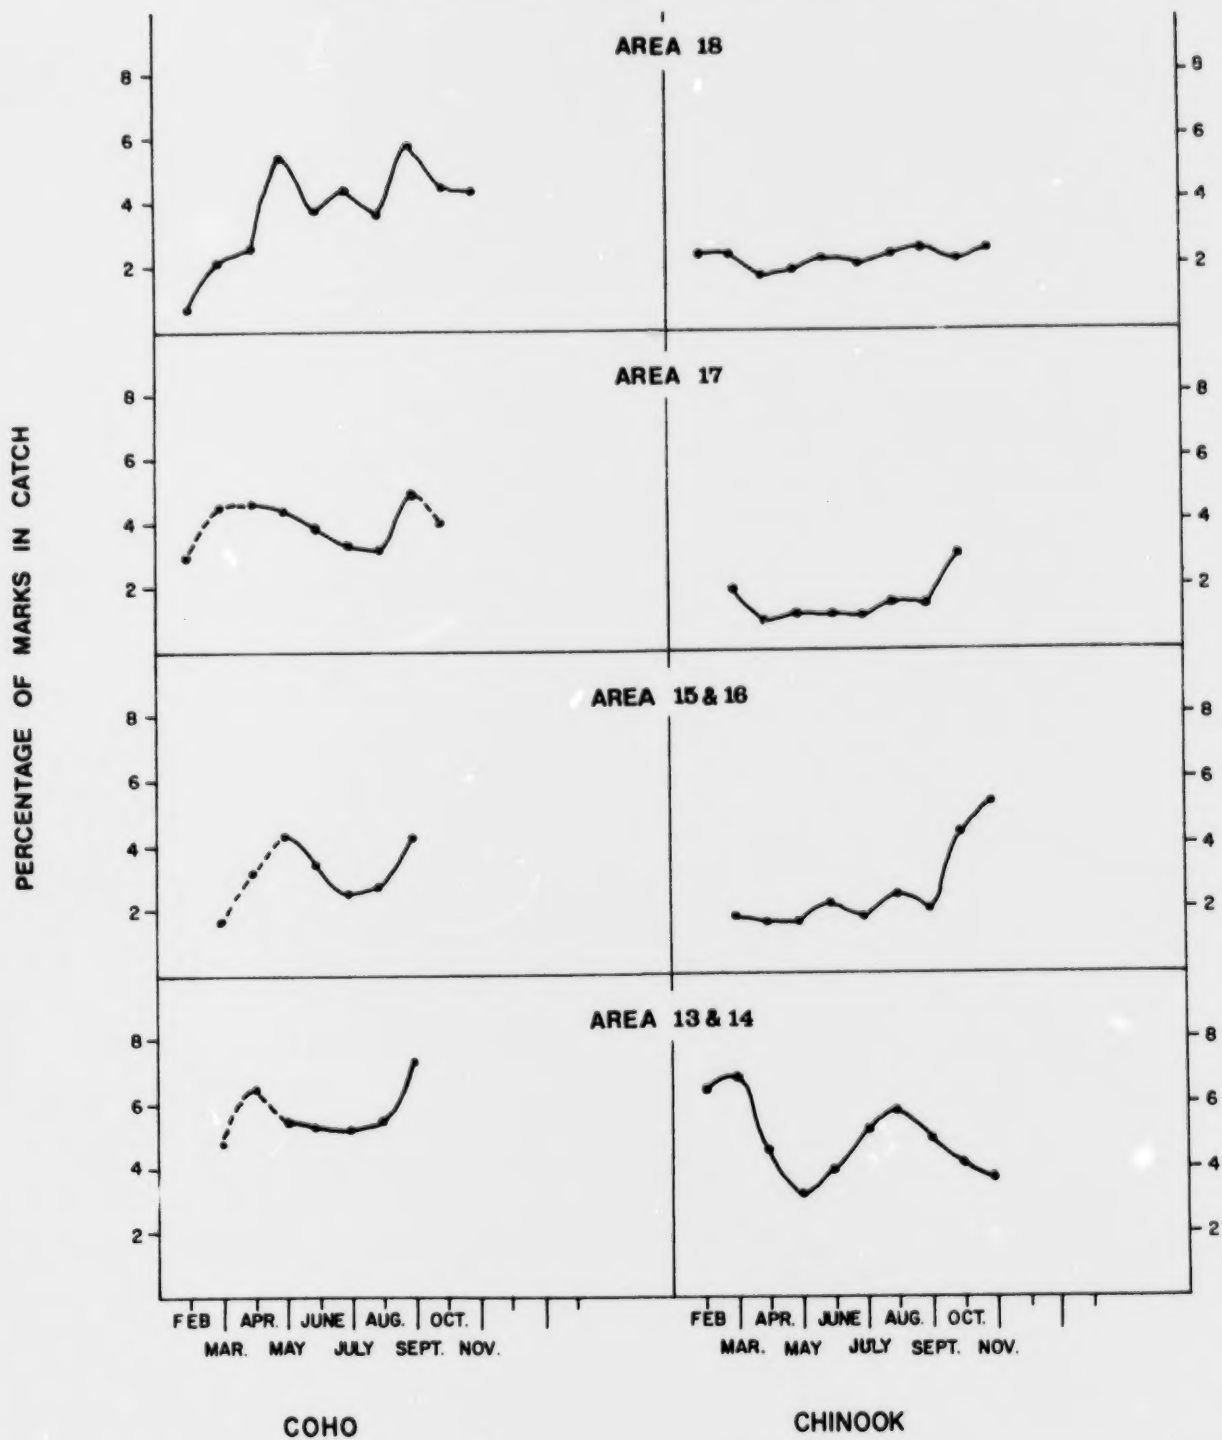

Figure 7. Incidence of marked coho and chinook in the catch reported by report logbook fishermen for grouped Statistical Areas.

The incidence of marked chinook for all Areas combined shows a seasonal pattern that is considerably less regular than is the coho pattern (Fig. 6). During the summer months between 2.5% and 3.5% of the chinook caught were marked; while the incidence of marks was generally lowest, around 1%, between March and May.

On Figure 7 again, the incidence of chinook marks for grouped Statistical Areas (other than Area 13-14) remained relatively constant, around 2.0%, until after September when the incidence rose by one or more percentage points. The trend for Area 13-14 was more varied with peaks of around 6% in March and August, and seasonal lows of less than 4% in May and November. Note that the highest incidence of marked chinooks occurred in Area 13-14.

BOAT DAY SUCCESS LEVEL

Figures 8 and 9 show, for 1975 and 1976 respectively, the percentage of catch taken and effort expanded at various levels of catch per boat day, ranging from zero to nine-plus chinook and coho salmon. Species, months, and catch Areas were pooled for these graphs; but only data from "second format" logbooks could be used because zero-catch days went unreported on "original format" logbooks.

The distributions of catch and effort at each of the daily boat success levels was extremely similar for the two years. From 66% to 70% of the salmon were taken aboard boats catching four or more salmon per boat day. Peak catches occurred at 4 and 8 salmon per day which suggests that a large number of limit catches were taken by boats with one or two anglers on board. Even though logbook fishermen are "better than average" anglers (catch per boat day averaged approximately 2.8) they still managed to be skunked on approximately 20% of their fishing days.

ANGLER SUCCESS LEVEL

Figures 10 and 11 show the percentage of catch taken and effort expanded at various levels of catch per angler day, ranging from zero to four chinook and coho salmon. Data source and treatment were similar to that in the previous section.

In both years, over 50% of the catch was taken by anglers who landed two or more fish per day; and 34% of the catch was taken by anglers catching their daily bag limit! As expected, there were a significant number of zero catch days, about one skunk per 5 fishing days if the 0.001 to 0.350 catch success category is included with the zero category.

INDIVIDUAL ANGLER LOGBOOK ENTRIES

In Figure 12, the boat catch data from the individual angler logbook entries in Appendix D was used to determine, for 1974 to 1976 combined, an annual boat catch pattern for coho and chinook separately and for both species

combined. Only the reported catch from full-year anglers was plotted. Full-year anglers are defined as those fishermen who had either reported their catch over at least 10 months of a year or turned in reports from both the year preceeding and the year following. The annual catch of some fishermen may be underestimated due to reports not being submitted.

Annual catches were distributed into intervals of 20 fish for catches up to 200 fish per year; above 200 fish per year the intervals were broken up as follows: 201-230, 231-260, 261-300, 301-400, 401-500, and 501+ fish.

A large fraction of the anglers (40%) reported their boats as catching less than 20 coho per year (Fig. 12, middle); 17% caught 21-40 coho per year; and only 11% of the anglers reported more than 100 coho per year. Average annual coho catch per boat was 47.

For chinook, by contrast, only 25% of the anglers reported that their boats landed less than 20 per year (Fig. 12, lower); 23% caught 21 to 40 chinook per year; and 22% of the anglers reported more than 100 chinook per year. Average annual chinook catch per boat was 68.

The combined catch graph for coho and chinook (Fig. 12, upper) shows that less than 10% of the boats caught 20 or fewer salmon per year; 8% caught 21 to 40 salmon; 44% caught over 100 salmon; and 13% caught over 200 salmon per year. In the very highest of the catch categories, guides are included as well as a few regular logbook fishermen who fished year round, mainly for chinook. Average annual catch per boat was 115.

Figure 13 shows annual fishing effort in boat days for full-year anglers in 1976, using data only from "second format" logbooks. The graph distributes annual effort into intervals of 10 boat days.

For this limited sample of 65 logbook fishermen, the majority (56%) fished less than 40 days per year. A peak in annual effort occurred in the 31-40 boat day category (25%); but beyond this peak effort falls off with only about 10% of the anglers reporting over 70 boat trips during 1976. Average number of fishing days in 1976 was 44 for logbook fishermen. This contrasts with an average of only 12 days fishing in tidal waters for the general saltwater angling public in British Columbia (Anon., 1977).

Clearly from catch and effort data presented above, the logbook fishermen represent a sample of the better saltwater salmon anglers in British Columbia.

ACKNOWLEDGEMENTS

We gratefully acknowledge the co-operation of sport fishermen who keep the Sport Fish Logbook records.
